Soprano Titanium
The Art of Smooth Skin

Picture Yourself in Silk

Introducing the latest breakthrough in hair removal: a pain-free, highly effective solution that gets rid of your unwanted hair, without making you want to tear your hair out.

Thanks to Alma's unique 3D technology and ICE Plus cooling system, you can now get soft, satin skin more quickly and comfortably than ever before.

Millions of people in numerous clinics around the world have already discovered the amazing benefits of Soprano. Isn't it time you took a walk on the smooth side, too?

It Doesn't Hurt To Have Smooth Skin

Soprano hair removal solution offers several incredible advantages to other available solutions, due to its unique combination of cutting-edge technologies, extra large applicator and advanced cooling system. **These features let you feel fabulous fast – pain free!**

The Beauty of 3

Featuring its exclusive 3D technology, Soprano combines the three most effective laser wavelengths into a single applicator, simultaneously targeting different tissue depths and anatomical structures within the hair follicle. **This means that different levels within the skin are targeted all at once, leading to a much more effective treatment – and skin that stays hair-free longer.**

Say Freeze!

Forget about pain or discomfort. **Soprano includes a breakthrough cooling system, called ICE Plus that has been uniquely designed to keep your skin cool throughout the entire session.** Sit back and chill out with a smoothie, as your skin becomes smooth and silky.

3-2-1 Smooth!

Another amazing benefit of Soprano is its extra-large Quattro applicator. This means that the coverage area is much bigger, significantly shortening treatment times and making the entire hair removal process much more comfortable and convenient. **You'll be out and about in less time than ever before!**

Safety First For All Shades

Soprano incorporates SHR™ technology, the only clinically proven laser hair removal method that is virtually painless, and also the safest for all skin types, including dark tones. Its unique gradual heating and single pulse delivery method effectively damages the hair follicle and delays re-growth, while preventing injury to the surrounding tissue. **This treatment can be performed anytime of the year, and works well on tanned skin, while ensuring that sun exposure does not leave any marks following treatment.**
